SUMMARY

Software Engineer with 5+ years of experience in backend engineering and infrastructure in Canada. Interested in large-scale platforms serving AI, payments, B2B or consumer workloads. Languages and frameworks: Go, C, C++, Python, Java, Rust, Solidity, GraphQL, React / Next.js. Tools: Kubernetes, Temporal, n8n, GCP, AWS, Terraform, gRPC, Kafka, PostgreSQL, Prometheus.

EDUCATION

University of Waterloo <i>Bachelor of Applied Science in Honours Computer Engineering</i>	Waterloo, Canada May 2023
---	------------------------------

EXPERIENCE

Dapper Labs <i>Software Engineer II, Backend</i>	Toronto, ON July 2024 - June 2026
--	--------------------------------------

- Architected Buybacks on NBA Top Shot, generating **\$15M+** in sales volume and **4x** monthly gross revenue.
- Authored TopShotIPFSResolver smart contract, ensuring decentralized durability of all NBA Top Shot assets.
- Led Ticketmaster integration to onboard **40k+** new users onto NBA Top Shot and NFL All Day.

Inflexion Games <i>Software Developer, Backend and Infrastructure</i>	Edmonton, AB July 2023 - July 2024
---	---------------------------------------

- Operated 50+ k8s clusters across 2 cloud providers, 1000+ nodes and 7 global regions to host 180k daily users.
- Led full-stack account consolidation and item granting initiatives in Go and C++, generating **\$2.4M** in revenue.
- Reduced GKE costs by **50%** by tuning node pool configurations. Architected content delivery infrastructure.

Carta <i>Software Engineering Intern</i>	Kitchener, ON Sept 2022 - Dec 2022
--	---------------------------------------

- Shipped contract onboarding workflow to onboard **\$325M** of revenue onto the Carta platform.
- Migrated onboarding frontend from monolith to micro-frontend, reducing build times from 24h to 10 minutes.
- Decomposed subscriptions domain into dedicated service, improving composability and developer experience.

Zynga <i>Software Engineering Intern, Data Ingestion</i>	Toronto, ON Jan 2022 - April 2022
--	--------------------------------------

- Architected and deployed observability infrastructure for serverless data streaming pipeline.
- Built generic metrics library in Go to serve StatsD-like metrics to providers like AWS Cloudwatch and Datadog.
- Improved telemetry and alerting using Splunk, Nagios, Grafana, and Terraform.

Dapper Labs <i>Backend Engineer Co-op, NBA Top Shot</i>	Vancouver, BC Jan 2021 - April 2021
---	--

- Architected a data verification platform in Go to significantly accelerate Customer Support workflows.
- Optimized GraphQL queries by migrating resolvers to a dedicated read service and utilizing field querying.

DBRS Morningstar <i>Software Engineering Intern</i>	Toronto, ON May 2019 - August 2019
---	---------------------------------------

- Built automated document generation tooling to significantly accelerate rating analyst workflows.

PROJECTS

rcuckoo (Rust) • Efficient 8-bit <u>Cuckoo filter</u> implementation in Rust.	
---	---

cgrad (C, SIMD) • Automatic differentiation engine using SIMD and SoA intrinsics in C, inspired by <u>Andrej Karpathy's micrograd</u> .	
---	---
